## PROFESSIONAL SUMMARY

Software Engineer (1.5+ yrs) building identity, payments, and event-driven backend systems in TypeScript/Node.js and Python across AWS, GCP, and Azure — production services for 1M+ users at 3M+ requests/day with 99.9% availability. Specialist in OAuth 2.0/OIDC (Ory Hydra, SAP CDC), event-driven architecture (SQS FIFO, Pub/Sub, DLQ), and observability (Datadog, k6).

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript, Python, SQL

**Backend:** Node.js, Fastify, Express.js, FastAPI, REST APIs, MikroORM, Microservices

**Frontend:** React.js, Next.js

**Cloud & DevOps:** AWS (Lambda, SQS, DynamoDB, S3, EC2, CloudWatch), GCP (Pub/Sub, Cloud Billing), Azure (Cost Management), Docker, Kubernetes, CI/CD

**Databases:** PostgreSQL, DynamoDB

**Identity & Security:** OAuth 2.0, OpenID Connect (OIDC), PKCE, SSO, Ory Hydra, SAP Customer Data Cloud (CDC), JWT, HMAC webhook validation

**AI Engineering:** Amazon Bedrock, LLM text-to-query pipelines, prompt engineering

**Observability & Testing:** Datadog APM (tracing, monitoring), Grafana k6 load testing, Jest

**Architecture:** Event-driven systems, idempotency, FIFO queues, dead-letter queues (DLQ), multi-tenant SaaS, System Design, Data Structures & Algorithms

## EXPERIENCE

### Tech Holding — Software Engineer

May 2025 – Present

Software Engineer Intern (campus placement, converted to full-time) • Jan 2025 – Apr 2025

Ahmedabad, India

### LIV Golf — Identity & Platform Engineering (global professional golf league)

- Engineered authentication and authorization services for the official platform of LIV Golf (global professional golf league), serving 1M+ users and 3M+ requests/day during live tournament weeks, sustaining 99.9% availability (Datadog-measured) across 7 tournament windows over 6+ months.
- Implemented end-to-end OAuth 2.0 / OpenID Connect (OIDC) Authorization Code + PKCE flows on Ory Hydra — consent management, passwordless email login, and QR-code device authentication — integrated with SAP Customer Data Cloud (CDC) for identity and consent management.
- Built event-driven user-data synchronization from SAP CDC webhooks through Google Cloud Pub/Sub with dead-letter queues (DLQ), ensuring reliable delivery and replay of identity events.
- Load-tested authentication flows with Grafana k6 at 50K concurrent virtual users (3,600+ req/s); used Datadog APM traces to tune Fastify plugin dependency graph and MikroORM/PostgreSQL connection pooling, eliminating bottlenecks ahead of tournament traffic spikes.

### CourseKey — Payments Migration (education payments platform, current)

- Building post-acquisition payment-data synchronization for 50K+ students across two organizations using AWS Lambda and SQS FIFO queues with custom idempotency and ordering logic, guaranteeing zero duplicate charges during platform cutover.

### Cost Canary — Multi-Cloud FinOps Platform

- Built one-click GCP and Azure cost integrations for a multi-tenant cloud cost-management (FinOps) platform — organization-wide tenant authorization, cross-account billing data access, and cron-based ingestion pipelines — expanding platform coverage beyond AWS.
- Shipped rule-based cost anomaly detection with automated reporting delivered through a custom-built Slack app (OAuth scopes, permission policies) and email channels.
- Developed an LLM-powered cost assistant on Amazon Bedrock using a text-to-query pipeline: natural-language questions are compiled into DynamoDB queries over per-tenant cost data, with answers synthesized from query results.

### Spark x Duda — CRM Website-Builder Integration (architecture & design)

- Architected the integration of the Duda website builder into Spark, a fitness-industry CRM: designed the 4-step site-provisioning flow (site creation, account creation, tier-based permission grants, SSO redirect), HMAC-SHA256-validated webhook processing, and HMAC token-based authentication for custom embedded widgets; authored architecture diagrams and technical specs used for implementation.
- Reverse-engineered the vendor's internal AI site-generation wizard via HAR capture and mitmproxy, proving the public API combined with an LLM-based document-parsing layer could replicate it — unblocking a key client deliverable.

## EDUCATION

### Bachelor of Technology, Computer Engineering — Dharmsinh Desai University

June 2021 – May 2025

GPA: 8.2/10 • Coursework: Distributed Systems, DBMS, OS, Computer Networks

Nadiad, India

## ACHIEVEMENTS & CERTIFICATIONS

- 600+ LeetCode problems (Top 7% globally) • CodeChef 3-Star (1600+) • Deep Learning Specialization (Coursera).
